Artificial Intelligence Whitepaper

Think about artificial intelligence that writing code for you and constantly learning. Describe the software and features you want to encode. The AI will serve you the software with hundreds of different visual options in a couple of minutes.

Artificial Intelligence Story

We're excited to launch the next big revolution in software development. By combining advanced statistical techniques with state-of-the-art natural language algorithms, our AI has the ability to write better software than developers themselves. The AI is not just another automation tool for testing and compiling code, but an entirely new type of development environment. With this tool, all of your code can be generated through conversation with the AI.

Many developers feel overwhelmed by the fact that they can't possibly ever learn everything there is to know about programming. The internet is full of complex topics that it's nearly impossible to know all there is to know about, and that makes it difficult for developers to develop. With AI, your development worries will be a thing of the past. Combining innovative technologies in machine learning, natural language processing, and human creativity, The AI will take an idea you give it and write the code so you don't have to.

The AI is always learning and will get better at writing code for you over time, no matter what you throw at it. The user interface is very easy and intuitive, so even if you haven't written code before, the AI gives anyone the ability to build their own software products.

Artificial Intelligence Project

Utility

The $AI will use on the platform to build your projects.

Vision

The AI will write the code for you because that's what it was made for. Turn your ideas into working, beautiful, tested products faster than ever before.

Mission

The AI is an intelligent, artificial intelligence that writes code for you. It was designed to make the process of producing quality code much simpler and less time-consuming. The AI can take your requirements and turn them into working code much like a human developer would do.

You won't have to pay a hundred thousand dollars to get your custom software. The AI will encode your software for just a couple of hundred dollars. You won't have to wait months. The AI writes code fast, secure, and without a mistake.

Artificial Intelligence Tokenomics

Transaction Fee

$AI Token features a 1% transaction fee for all transactions. The fee is automatically transferred to the PancakeSwap liquidity pool.

Token Burn

$AI will manually burn a total of 2.5% of the total supply annually (5,000,000 $AI/year) over five years from the dedicated burn wallet.

Artificial Intelligence Token Distribution

Total Supply

$AI Token has a total supply of 1,000,000,000,000

Distribution

15,000,000,000 $AI to Liquidity

85,000,000,000 $AI to Marketing Wallet

$50,000,000,000 $AI to Airdrop

150,000,000,000 $AI to Annually Burn (@ 25,000,000,000 tokens annually over 5 years)

200,000,000,000 $AI to Dev Wallets

200,000,000,000 $AI to Operation Expenses

200,000,000,000 $AI to Team

100,000,000,000 $AI to Token Locker

Artificial Intelligence Roadmap

Stage 1 – $AI Token Launch

$AI token launch
Whitepaper release
CoinGecko listing
Coinmarketcap listing

Stage 2 – Beta Testing

Beta testing.
Exchange listing.
Exclusive rewards for $AI holders

Stage 3 – Community Airdrop

Community Airdrop
Key partnerships announced

Stage 4 – Alpha Testing

Alpha testing
DeFi partnership
Major exchange listing

Artificial Intelligence

THANK YOU

for being an early investor on the $AI project.
